Policy Brief No. 2

May 18, 2020

Dissecting the US Treasury Department's Round 1 Allocations of CARES Act COVID-19 Relief Funding for Tribal Governments

by

Randall K.Q. Akee, Eric C. Henson, Miriam R. Jorgensen & Joseph P. Kalt¹

I. Introduction and Key Results

In a joint statement, Treasury Secretary Mnuchin and Interior Secretary Bernhardt detailed the amount of CARES Act Title V funds that would be released for federally recognized American Indian tribes starting on May 5, 2010. They noted that the US Treasury Department would “distribute 60 percent of the \$8 billion to Tribes based on population data used in the distribution of Indian Housing Block Grant (IHBG), subject to a floor of \$100,000. This data is based on US Census figures and is already familiar to Tribal governments.”²

In a separate document, the US Treasury Department detailed exactly how the \$4.8 billion would be allocated among tribal governments. The three steps in this allocation are:

Step 1. Calculate the pro-rata payment for each Tribal government based on single race and then multi-race data for each Tribe's IHBG formula area,³ and use the larger result for each Tribal government.

² <https://home.treasury.gov/news/press-releases/sm998>, accessed May 10, 2020.

³ 24 CFR § 1000.302 “What are the definitions applicable for the IHBG formula?” (December 22, 2016), at <https://www.law.cornell.edu/cfr/text/24/1000.302> (accessed May 11, 2020) defines “formula area” as reservations, trust lands, Department of Interior near-reservation lands, former Indian reservations in Oklahoma, Congressionally mandated service areas, state tribal areas, tribal designated statistical areas, California tribal jurisdictional areas, and Alaska Native Villages or Corporation as set forth in ANCSA.

Step 2. Assign a minimum payment of \$100,000 to those Tribal governments that would otherwise receive less than that amount under step 1.

Step 3. For Tribal governments that would receive a payment greater than the minimum, a pro-rata reduction is made for those amounts above the minimum for each Tribe so that the total amount for all Tribes does not exceed \$4.8 billion.⁴

In the analysis below, we have followed this “recipe” using the publicly available IHBG information from the Department of Housing and Urban Development (HUD) website that explains the IHBG funding formula.⁵ Key takeaways from our analysis include:

- Different tribal and reservations population data series give rise to different allocations of CARES Act dollars. The particular population choice has significant impacts on the amount of dollars received by certain tribes.
- The Department of the Treasury chose to use tribal population numbers derived from racial population data that ties to HUD’s block grant formula for allocation of housing monies. This population choice by Treasury resulted in a number of tribes receiving *de minimis* payments that are clearly not reflective of the population of tribal citizens or of tribal needs.
- Further, in failing to reflect actual counts of enrolled tribal citizens, Treasury’s decision to use racial population data from HUD’s IHBG dataset demonstrably produces arbitrary and capricious allocations of CARES Act funds across tribes.
- None of the publicly available data series are reliable for the purposes to which Treasury has tried to put the HUD IHBG data. Each such data series results in arbitrary and capricious allocations of the CARES Act monies.
- The case is strong that an appropriate allocation rule would employ the current tribal enrollment figures submitted by tribes to the Treasury Department in mid-April.

If and to the extent the Treasury has not followed the description of its allocation calculations that has been publicly provided, the numerical figures we report below would change. However, the key conclusions we reach regarding the inadequacies of those calculations and, in particular, the infirmity of the data being used by Treasury would not change.

II. Definitions

The core of Treasury’s approach to the allocation of the first \$4.8 billion of CARES funds to tribal governments is the attempt to give each federally recognized tribe the share of the \$4.8 billion that accords with that tribe’s share of the aggregate population of all the federally recognized tribes (subject to the constraint that no tribe would receive less than \$100,000). The US Census Bureau collects, with some estimation involved, population statistics for people residing on American Indian reservations and Alaska Native Village Statistical Areas (ANVSAs),⁶ as well as Oklahoma⁷ and other tribal designated Statistical Areas.⁸ These population estimates for each tribal area are updated by the Census Bureau’s American Community Survey 5-Year Data

Based on terminology used by HUD and knowledge of the racial category data collected by the US Census Bureau, it appears that HUD utilizes Census Bureau data in its IHBG formula. Specifically, the IHBG funding formula uses the terms “single race” and “multi-race” for AIAN people residing in what HUD terms “formula areas”. As the US Census Bureau uses them, the term “single race” refers to anyone self-identifying their race as *solely* American Indian or Alaska Native in the US Census data. In the language of the US Census (and HUD), this is referred to as “AIAN alone”. We understand that the term “multi-race” is inclusive of individuals identifying to the US Census Bureau as AIAN alone and individuals self-identifying their race as AIAN in combination with one or more other races. Therefore, the multi-race population counts should be either equal to or larger than the single race population counts. Finally, we note that “formula area” is defined in 24 CFR §1000.302 as reservations, trust lands, Department of Interior near-reservation lands, former Indian reservations in Oklahoma, Congressionally mandated service

⁶ ANVSAs “represent the more densely populated portion of the Alaska Native Villages (ANV). Examples of ANVSAs include associations, bands, clans, communities, groups, tribes, and villages. The ANV boundaries are hard to locate, so the Census Bureau defines the statistical areas around the settled portion of the ANV. Furthermore, to be an ANVSA, Natives have to live within the area at least one season each year. The boundaries are reviewed by locals and they cannot overlap each other or an American Indian Reservation (AIR).” US Census, *American Indian Areas Geography–Statistical*, available at https://www2.census.gov/geo/pdfs/education/brochures/AmericanIndianAreaGeography_statistical.pdf, accessed May 14, 2020.

⁷ “OTSAs are defined for American Indian tribes that had a former reservation in Oklahoma. The boundary of an OTSA is the former reservation boundary, except where modified by agreements between neighboring tribes. Some OTSAs have tribal subdivisions and others are part of joint use areas. The boundaries are reviewed before each census through the Tribal Statistical Areas Program (TSAP).” US Census, *American Indian Areas Geography – Statistical*, available at https://www2.census.gov/geo/pdfs/education/brochures/AmericanIndianAreaGeography_statistical.pdf, accessed May 14, 2020.

⁸ Tribal Designated Statistical Areas (TDSAs) are defined as “statistical areas for federally recognized American Indian tribes that do not currently have a federally recognized land base. They represent a contiguous and compact area that contain a concentration of individuals who identify with that tribe and there is organized tribal activity. These areas may cross state boundaries but they may not cross American Indian Reservations, Alaska Native Areas, or Hawaiian Home Lands boundaries.” US Census, *American Indian Areas Geography–Statistical*, available at https://www2.census.gov/geo/pdfs/education/brochures/AmericanIndianAreaGeography_statistical.pdf, accessed May 14, 2020.

areas, state tribal areas, tribal designated statistical areas, California tribal jurisdictional areas, and Alaska Native Villages or Corporation as set forth in ANCSA.⁹

In addition to the foregoing, the HUD IHBG public-use (available on the HUD IHBG website) dataset contains enrollment data for each tribe or village, which we take to mean tribal citizenship enrollment. Citizens of tribes are commonly termed “enrolled members,” with tribes varying in the criteria that determine citizenship. It is our understanding that tribes participating in the IHBG program (and/or perhaps other HUD programs) are asked to report their populations of enrolled citizens, but that it is widely understood that these counts are not actually used in the IHBG allocation formula and that reporting and updating of citizenship counts are inconsistent. The Department of the Treasury requested that tribes certify their enrolled citizenship populations as of January 1, 2020 upon registering for CARES Act funds via its “Coronavirus Relief Fund Web Portal”, with a registration deadline of April 17, 2020.¹⁰ While hundreds of tribes are known to have registered via the portal and Treasury is in possession of data collected through the portal, Treasury’s description (see above) of its CARES Act allocation formula indicates that it did not utilize any portal-collected data and the complete portal-submitted data are not available to the public.

As our analysis below documents, the various *publicly available* data series on population that could conceivably have been used by Treasury in its CARES Act allocation formula are mutually and materially inconsistent. In addition, each series contains arbitrary and capricious deviations from known facts regarding various tribes’ enrolled citizenship counts.

III. Analysis

In order to assess the sensitivity and coherence of the allocations of the CARES Act monies to alternative measures of tribes’ populations, we examined the allocation consequences of five different measures of those populations. In the first case, we followed exactly the steps that Treasury indicates it used in determining the allocation of the CARES Act monies. In the second analysis, we took the population by tribe that was used by HUD in its 2020 IHBG funding formula.¹¹ In the third analysis, we used HUD’s count of each tribe’s “single race” American Indian/Alaska Native (“AIAN”) population. In the fourth analysis, we used the “multiple race” AIAN population count. In the fifth analysis, we used the count of enrolled tribal citizens that is contained in the HUD worksheet describing HUD’s 2020 IHBG formula. Note that this latter measure of the number of tribal citizens is in HUD’s worksheet and was available to Treasury, but

⁹ See note 3 above.

¹⁰ US Department of the Interior, Bureau of Indian Affairs, *Coronavirus Relief Fund Web Portal*, https://www.bia.gov/sites/bia.gov/files/assets/as-ia/opa/pdf/Indian%20Affairs%20Registration%20Guidance%204.14.2020_508.pdf, accessed April 17, 2020.

¹¹ See the following HUD website for a description of the IHBG funding formula in detail: https://www.hud.gov/program_offices/public_indian_housing/ih/codetalk/onap/ihbgformula.

is *not* the population figure utilized by HUD in its 2020 IHBG formula. Instead, the 2020 formula’s decision rule is to use utilizes the larger of either a tribe’s single race population or its multi-race population.

To our knowledge, no comprehensive list of Treasury’s CARES Act Title V monies has been made public. Nevertheless, allocations for certain tribes have been revealed. For example, Senator John Hoeven (R-North Dakota) has indicated by press release that:

“Under the population distribution formula released by Treasury, North Dakota Tribes will receive approximately \$109 million in funds to combat COVID-19:

Spirit Lake Nation: \$12 million

Standing Rock Sioux Tribe: \$21 million

MHA Nation (Three Affiliated Tribes): \$17 million

Sisseton Wahpeton Oyate: \$15 million

Turtle Mountain Band of Chippewa Indians: \$44 million.”¹²

Table 1 below compares these (apparently) actual CARES Act Title V allocation amounts reported by Senator Hoeven to the allocation amounts we have calculated using: (1) the population that Treasury asserts it employed (i.e., the larger of a tribe’s single race population or multi-race population reported in the HUD data; labeled “Population Used by Treasury” in Table 1); (2) the population actually used by HUD in its 2020 IHBG formula (labeled “IHBG Formula Population”); (3) the “Single Race Population” contained in the HUD IHBG worksheet; and (4) the “Multi-Race Population” contained in the HUD IHBG worksheet.

Table 1
Comparison of Treasury Allocation Methodology to
Alternatives Using HUD Racial Population Counts

Tribe	[1]		[2]		[3]		[4]	
	Population Used by Treasury	Estimated Allocation - Treasury	IHBG Formula Population	Estimated Allocation - IHBG	Single Race Population	Estimated Allocation - Single Race	Multi-Race Population	Estimated Allocation - Multi-Race
Spirit Lake Tribe	4,013	\$12,183,912	3,942	\$12,338,617	3,942	\$14,483,599	4,095	\$12,184,205
Standing Rock Sioux Tribe	6,870	\$20,858,080	6,621	\$20,723,994	6,621	\$24,326,715	6,870	\$20,858,583
Three Affiliated Tribes of Fort Berthold	5,821	\$17,673,200	5,382	\$16,845,874	5,382	\$19,774,412	5,821	\$17,673,626
Sisseton-Wahpeton Oyate	4,997	\$15,171,445	4,635	\$14,507,735	4,635	\$17,029,803	4,997	\$15,171,810
Turtle Mountain Band of Chippewa Indians	15,207	\$46,170,135	13,591	\$42,540,371	13,591	\$49,935,718	15,207	\$46,171,247
Total	36,908	\$112,056,774	34,171	\$106,956,591	34,171	\$125,550,247	36,990	\$112,059,471

Several observations emerge from this data. First, the allocations derived utilizing the Treasury Department’s description of its allocation methodology (i.e., using the larger of either a tribe’s single race or multi-race population) are quite close to Senator Hoeven’s dollar figures

¹² <https://www.indian.senate.gov/news/press-release/hoeven-treasury-announces-initial-allocation-8-billion-historic-cares-act-funds>, accessed May 10, 2020.

(recognizing that Senator Hoeven apparently rounded the allocations to even million-dollar amounts).

Second, for all five of the tribes shown on Table 1, Treasury's population figures appear to stem from the multi-race population figures found in HUD's worksheet. The largest variances between what we estimate the US Treasury Department allocated and the other population categories all stem from the single race reporting category. The smallest payment variance from a hypothetical shift to single race population measures for these five tribes would be an increase of nearly \$2 million in payments for the Sisseton-Wahpeton Oyate. The largest payment variance from a hypothetical shift to single race population measures for these five tribes would be an increase of nearly \$4 million in payments for the Turtle Mountain Band of Chippewa Indians. In the aggregate, the use of the single race population approach would have yielded the North Dakota tribes an additional \$14 million compared to Treasury's approach.

Finally, Table 1 shows that the publicly stated allocations to these five North Dakota tribes would vary by a few million dollars for any given tribe for any of the different methods of counting tribal populations. The use of the single race data reduces the total population of all tribes receiving funds (and especially for some of the larger tribes with relatively large multi-race populations, such as the Cherokee Nation of Oklahoma) and thus the \$4.8 billion is spread over a smaller total count of individuals. The five tribes in Table 1 have proportionately greater than average single race populations and therefore the single race approach produces larger allocations for them than does the multi-race approach used by Treasury under its "larger of" rule.

Table 2 replicates the forgoing analysis for a number of additional tribes. The tribes shown have been selected merely for purposes of illustration and are not intended to be a representative sample. Nevertheless, several observations and anomalies are apparent.

Table 2

CARES Act Allocations Using Treasury Methodology
v. Alternative HUD Racial Population Counts

Tribe	[1]		[2]		[3]		[4]	
	Population Used by Treasury	Estimated Allocation - Treasury	IHBG Formula Population	Estimated Allocation - IHBG	Single Race Population	Estimated Allocation - Single Race	Multi-Race Population	Estimated Allocation - Multi-Race
Miccosukee Tribe	0	\$100,000	0	\$100,000	0	\$100,000	0	\$100,000
Belkofski	0	\$100,000	0	\$100,000	0	\$100,000	0	\$100,000
Tonawanda Band of Seneca	0	\$100,000	0	\$100,000	0	\$100,000	0	\$100,000
Tuscarora Nation	0	\$100,000	0	\$100,000	0	\$100,000	0	\$100,000
Delaware Tribe of Indians (Eastern)	0	\$100,000	0	\$100,000	0	\$100,000	0	\$100,000
Tlingit and Haida Indian Tribes Central Council	5,600	\$17,002,220	3,786	\$11,850,331	3,786	\$13,910,428	5,600	\$17,002,629
Cheyenne River Sioux	6,861	\$20,830,755	6,519	\$20,404,730	6,519	\$23,951,949	6,861	\$20,831,257
Standing Rock Sioux Tribe	6,870	\$20,858,080	6,621	\$20,723,994	6,621	\$24,326,715	6,870	\$20,858,583
Kiowa Indian Tribe	7,225	\$21,935,900	7,225	\$22,614,538	5,162	\$18,966,093	7,225	\$21,936,428
Karuk Tribe	7,498	\$22,764,758	6,639	\$20,780,335	6,639	\$24,392,850	7,498	\$22,765,306
Citizen Potawatomi Nation	17,717	\$53,790,773	17,717	\$55,454,916	10,522	\$38,659,674	17,717	\$53,792,068
Oglala Lakota Sioux Tribe	18,083	\$54,901,990	17,669	\$55,304,674	17,669	\$64,919,005	18,083	\$54,903,311
Cheyenne and Arapaho Tribes	19,974	\$60,643,275	19,974	\$62,519,416	12,799	\$47,025,771	19,974	\$60,644,735
Yakama Indian Nation	21,764	\$66,077,913	21,764	\$68,122,187	15,645	\$57,482,474	21,764	\$66,079,504
Hopi Tribe	28,844	\$87,573,577	26,011	\$81,415,466	26,011	\$95,568,976	28,844	\$87,575,685
Total	140,436	\$426,879,242	133,925	\$419,690,586	111,373	\$409,703,936	140,436	\$426,889,504

For those tribes with non-zero population counts in the IHBG dataset, a pattern of variation akin to that seen in Table 1 is apparent. Certain tribes exhibit wide variation according to the population measure employed. This is perhaps not surprising. The Citizen Potawatomi Nation have a relatively small single race population count (10,522) compared to its multi-race count (17,717). Shifting from a single race population approach to CARES Act Title V allocation to Treasury’s multi-race population approach would reduce Tulalip Tribes’ allocation from just under \$54 million to approximately \$39 million. The Hopi Tribe, on the other hand, has a relatively large single race population count (26,011) compared to its multi-race population count (28,844) and its allocation would be *increased* if a single race approach were used (compared to the allocation received under Treasury’s “larger of” approach).

As indicated in Table 2, a number of tribes in the IHBG dataset are shown by HUD to have population measures of zero for both single race and multi-race designations. Table 2 displays just five of these tribes. Under the Treasury’s “larger of” approach, tribes having single race and multi-race population counts of zero in the IHBG dataset receive CARES Act Title V allocations of just \$100,000. This produces gross anomalies. For example, according to the IHBG dataset utilized by Treasury, the Delaware Tribe of Indians (Eastern) in Table 2 has an enrolled population of more than 11,000 tribal citizens; this is data available to, but *not* utilized by, Treasury. Basing CARES Act Title V allocations on HUD’s figure for enrolled population would have resulted in an allocation to the Delaware Tribe of Indians (Eastern) of approximately \$24 million, instead of the \$100,000 allocated by Treasury (see Table 3 below).

As noted, HUD’s IHBG worksheet contains undated data on the number of enrolled tribal citizens for most tribes. These data were not used by Treasury in its recent allocation of CARES

Act Title V monies, and they were only used in a handful of limited instances by HUD in its 2020 IHBG formula to determine splits between smaller, landless tribes sharing service areas. Yet, Title V is explicitly devoted to COVID-19 crisis funding for *tribal governments*. Thus, particularly under Title V of the CARES Act, the population of enrolled tribal citizens – i.e., the individuals, whether they be single race or multi-race, over which tribal governments have jurisdiction and to whom those governments owe duties to serve – would arguably be *the population of concern*. Accordingly, we have compared our calculation of Treasury’s recent allocations of Title V monies predicated on outdated race-based data to the allocations that would have resulted from the use of HUD’s likewise generally outdated and often inaccurate enrolled citizen population figures instead of Treasury’s approach of choosing the larger of HUD’s single race population or multi-race population. The results for all tribes covered by the HUD IHBG dataset are shown in Appendix A. For purposes of illustration, selected results for the same 15 tribes as contained in Table 2 are shown in Table 3.

Table 3
Select Results:
CARES Act Allocations Using Treasury’s HUD Racial Population Counts
v. HUD’s Enrolled Citizen Counts

Tribe	[1]		[2]		Difference: HUD Racial Population minus HUD Enrolled Population	
	HUD Racial Population (Used by Treasury)	Estimated Allocation	HUD Enrolled Population (Undated)	Estimated Allocation	Population	Variation in Title V Allocation
Miccosukee Tribe	0	\$100,000	400	\$853,373	-400	-\$753,373
Belkofski	0	\$100,000	62	\$132,273	-62	-\$32,273
Tonawanda Band of Seneca	0	\$100,000	0	\$100,000	0	\$0

Tlingit and Haida Indian Tribes Central Council	5,600	\$17,002,220	25,949	\$55,360,449	-20,349	-\$38,358,229
Cheyenne River Sioux	6,861	\$20,830,755	15,376	\$32,803,663	-8,515	-\$11,972,908
Standing Rock Sioux Tribe	6,870	\$20,858,080	14,170	\$30,230,743	-7,300	-\$9,372,663
Kiowa Indian Tribe	7,225	\$21,935,900	11,000	\$23,467,761	-3,775	-\$1,531,861
Karuk Tribe	7,498	\$22,764,758	3,749	\$7,998,240	3,749	\$14,766,518
Citizen Potawatomi Nation	17,717	\$53,790,773	34,145	\$72,846,064	-16,428	-\$19,055,291
Oglala Lakota Sioux Tribe	18,083	\$54,901,990	43,146	\$92,049,093	-25,063	-\$37,147,104
Cheyenne and Arapaho Tribes	19,974	\$60,643,275	12,945	\$27,617,288	7,029	\$33,025,987
Yakama Indian Nation	21,764	\$66,077,913	10,984	\$23,433,626	10,780	\$42,644,287
Hopi Tribe	28,844	\$87,573,577	14,422	\$30,768,368	14,422	\$56,805,209
Total	140,436	\$426,879,242	197,362	\$421,258,572	-56,926	\$5,620,670

Table 3 compares the population counts and Title V allocations resulting under (1) application of Treasury’s stated decision rule of the larger of the single race population count or the multi-race population count in the IHBG dataset versus (2) HUD’s figures for the populations of enrolled citizens. As can be seen in the Table, there are large variations in population numbers between those in the IHBG dataset and those that the US Treasury Department has indicated it used.

For example, for the Oglala Lakota Nation (labeled the Oglala Lakota Sioux Tribe in the HUD data), the Treasury approach counts 25,063 fewer people than the HUD measure of enrolled citizens. *If* enrolled citizen population is taken to be the proper measure of population for purposes of Treasury’s recent allocation of CARES Act Title V monies, the Oglala Lakota Nation is “under-represented” in Treasury’s methodology and would be allocated more than \$37 million in additional funding if Treasury were to use the HUD series on enrolled population. On the other hand, the Yakama Indian Nation has 10,780 fewer HUD-counted enrolled citizens than the Treasury-designated population. As a result, Yakama is “over-represented” in Treasury’s methodology, receiving an extra \$42.6 million under Treasury’s approach relative to a citizenship-based approach.

Tables 4 and 5 show the top 25 “under-represented” and top 25 “over-represented” tribes in the Treasury methodology. We stress again, however, that these concepts of “over-“ and “under-represented” refer only to the allocation results under one dataset versus another. *We put “over” and “under” in quotes to emphasize that neither HUD’s enrolled citizen data nor any of HUD’s racial population counts are numerically credible.*

Table 4
Allocating the First \$4.8 Billion of CARES Act Funds to Tribes:
Top 25 "Under-Represented" Tribes under Treasury's Use of IHBG AIAN Population
Relative to Using HUD's Counts of Enrolled Tribal Citizens

TRIBE	State	[1]	[2]	[3]
		Treasury Allocation Using HUD AIAN (Single + Multi-Race) Population	Allocation Based on HUD Undated Count of Enrolled Tribal Citizens	[Col. 1 - Col. 2] Allocation Difference: HUD Racial Population minus HUD Enrolled Population
Choctaw Nation	OK	\$153,162,676	\$482,787,318	-\$329,624,641
Cherokee Nation	OK	\$373,529,663	\$681,755,531	-\$308,225,868
Sault Ste. Marie Tribe of Chippewa Indians	MI	\$41,861,894	\$94,713,751	-\$52,851,857
Tlingit and Haida Indian Tribes Central Council	AK	\$17,002,220	\$55,360,449	-\$38,358,229
Oglala Lakota Sioux Tribe	SD	\$54,901,990	\$92,049,093	-\$37,147,104
Navajo Nation	AZ	\$560,557,118	\$592,752,980	-\$32,195,862
Tohono O'odham Nation	AZ	\$29,325,793	\$56,905,054	-\$27,579,261
Delaware Tribe of Indians (Eastern)	OK	\$100,000	\$23,497,629	-\$23,397,629

With regard to the credibility – i.e., ability to avoid arbitrary and capricious results – of the various HUD racial population count series, we have seen above that different series yield widely different outcomes. This is particularly true of the cases of zero population in Treasury’s approach. These cases may arise because a tribe does not participate in relevant HUD programs and, hence, has no population qualified for IHBG monies, or because of HUD’s definition of a “formula area”.¹³ In Table 6 below, we provide an examination of tribes that have zero population according to the IHBG dataset. To illustrate the points, in the table we focus on five tribes for which the US Treasury Department’s population counts indicate zero population.

¹³ See Note 3 above.

Table 6
Cases of Zero Population under Treasury’s Allocation Methodology

Tribe	[1]		[2]	
	HUD Single Race Population	Estimated Allocation under Treasury Methodology	ACS 2014-2018 Single Race Population	Estimated Allocation Using ACS Single Race Population
Miccosukee Tribe	0	\$100,000	0	\$100,000
Onondaga Nation	0	\$100,000	88	\$265,523
Tonawanda Band of Seneca	0	\$100,000	373	\$1,125,454
Tuscarora Nation	0	\$100,000	758	\$2,287,115
Delaware Tribe of Indians (Eastern)	0	\$100,000	1,198	\$3,614,728
Total	0	\$500,000	2,417	\$7,392,820

As discussed above, the Census Bureau’s American Community Survey (ACS) reports single race and multi-race AIAN tribal populations (based on reservation and related geographies) for 2014-2018. Only the single race counts are now being publicly released. Using this publicly available data on single race AIAN populations, Table 6 shows the CARES Act allocations under the Treasury Department’s methodology. All are at Treasury’s \$100,000 minimum. These are compared to the results obtained utilizing the ACS data. In four cases, the US Treasury Department’s allocation of \$100,000 is significantly lower than the amount the tribes would be entitled to if their population was calculated according to ACS data. The one outlier is the Miccosukee Tribe, and clearly it presents a data issue that must be examined (by, perhaps, turning to enrollment data). The undated HUD enrollment information indicates that the Miccosukee Tribe has about 400 enrolled tribal citizens. The Miccosukee Tribe reports that “[p]resent Tribal members now number over 600.”¹⁴ As indicated in Appendix A, the former figure results in an allocation of more than \$850,000, as compared to the \$100,000 determined under Treasury’s methodology.

Finally, we consider enrollment data submitted to Treasury during the verification process established – but thus far not used – by Treasury in its determination of CARES Act Title V allocations. It is known that hundreds of tribes, perhaps very nearly all, submitted data to Treasury via the special digital portal established by the Department. The data submitted, however, are not public. Fortunately, in a number of cases, individual tribes have publicly revealed data on their enrolled citizen population through, e.g., official tribal websites and in the course of recent litigation concerning the allocation of CARES Act funds.

We note that HUD’s enrollment data is often very stale. This is because enrollment does not factor into HUD’s IHBG calculations for tribes with significant land-bases. As noted above, HUD’s enrollment data is only used in very limited cases for determining IHBG allocations to smaller,

¹⁴ *Miccosukee Tribe* at <https://tribe.miccosukee.com/>, accessed May 15, 2020.

landless tribes with shared service areas. Consequently, tribes frequently do not provide updated enrollment information to HUD because that is not information HUD typically needs or requires, and for the obvious reason that there is no need to update paperwork about a datapoint that does not impact the monies allocated to a tribe by HUD (which relies on the erroneous race-based Census population counts).

Table 7 compares a sample of the publicly disclosed and verified enrolled citizen population counts as of 2020 to the data contained in HUD’s IHBG worksheets. The publicly disclosed Treasury portal data were verified and submitted by tribal officials under threat of federal penalty for misrepresentation and were publicly revealed in legal filings pursuant to recent litigation over Treasury’s allocation of CARES Act funds.¹⁵ While the sample is small, the discrepancies are disconcerting. In the case of the Cheyenne River Sioux Tribe, for example, the recently publicly disclosed count of enrolled citizens is fully 30% higher than the data contained in the HUD dataset. This large discrepancy is consistent with the fact that HUD does not use the Cheyenne River Sioux Tribe’s enrollment information to allocate HUD funding and, thus, there would be no reason for the Tribe to update its enrollment information with HUD. In fact, it is generally known that the HUD enrollment data are only very infrequently updated by tribes.¹⁶

Table 7
HUD’s Undated Enrolled Citizen Counts Are Inconsistent with
Tribe’s Publicly Disclosed 2020 Enrolled Citizen Counts

Tribe	Publicly Disclosed 2020 Enrolled Population	HUD Undated Enrolled Population	Difference: Disclosed v. HUD	Percentage Discrepancy
Cheyenne River Sioux Tribe	21,965	15,376	6,589	30%
Confederated Tribes of the Chehalis Reservation	979	830	149	15%
Tulalip Tribes	4,977	4,622	355	7%
Houlton Band of Maliseet Indians	1,835	1,800	35	2%
Ute Indian Tribe of the Uintah and Ouray Indian Reservation	3,157	3,174	-17	-1%

IV. Conclusion

It is clear that the various datasets on tribal populations that can be examined by third parties produce widely and wildly differing allocation results for the CARES Act Title V funds. This creates demonstrable inequity in the form of gross and frequent “under-representation” and “over-representation” of hundreds of tribes in the allocation process, not to mention concomitant conditions that are ripe for extensive and intensive challenges and even litigation. We believe the case is strong for using the portal-submitted tribal citizen counts already in Treasury’s

¹⁵ *Agua Caliente Band of Cahuilla Indians, et al. v. Steven Mnuchin...*, United States District Court for the District of Columbia, Case No. 20-cv-01136 (APM).

¹⁶ Personal communication with Jennifer Weddle, Greenberg Traurig, LLP, May 12, 2020.

possession. As noted, these figures were requested by and provided to Treasury. Moreover, they were legally verified by tribal governments, with those governments having every reason to believe that the allocations of CARES Act monies would rely upon their submissions in some fashion. As we have argued above, *accurate* tribal enrolled citizen counts measure the population to which tribal governments are responsible and over which they have jurisdiction. Title V's explicit focus on the stabilization of tribal *governments* makes it logical to base any population-derived allocation of Title V funds on the actual populations of enrolled citizens.

Notwithstanding these observations, at this point, with CARES Act Title V monies already being dispersed under Treasury's formula, it seems unlikely that Treasury could or would engage in some clawing back and adjustment of already-distributed monies in order to remedy arbitrary and capricious aspects of its initial formula. However, \$3.2 billion of Title V monies have not yet been distributed and Treasury is seeking guidance on the appropriate formula for those funds. Treasury should consider utilizing this forthcoming round of further allocations as a means of remedying the problems created by its first-round formula, offsetting over-compensations and under-compensations revealed by application of a revised first-round formula that is based on use of the portal-submitted data on enrolled citizen population counts.
